

The DRC BEACON reporting solution offers users a flexible system for data presentations. By offering a static report design that gives consistency across users and a dynamic reporting system that allows for individualization of data analysis, DRC provides a robust reporting solution allowing educators to more carefully design instructional interventions based on benchmark data.

Teachers, in collaboration with parents and students, can set goals and plan instructional interventions to assist students in making the greatest growth in academic achievement.

District and school building leaders can monitor the progress over time of students and classrooms, informing building and district-wide academic improvement planning.

- A student's score is compared to other students with similar scores to assess whether the student is experiencing low, moderate, or high growth.
- Reports will include information on the predicted score range.
